Lab 03: Level Blockout

Level 1: Trap Adventure 2 Inspired

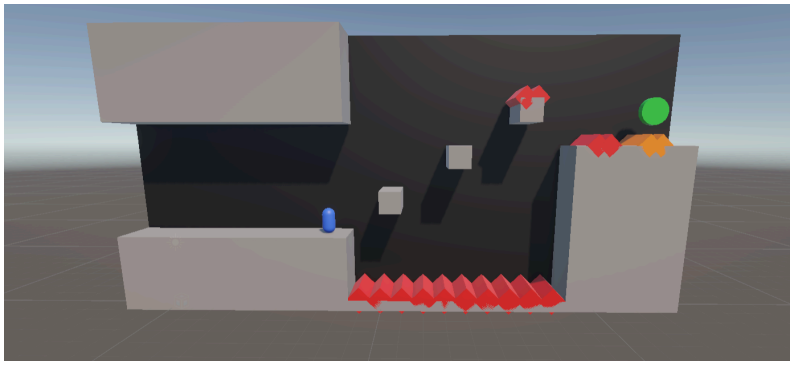

Game: Trap Adventure 2 | Level Type: 2D-style platforming level recreated using 3D blockout geometry

1. Level Explanation

This level is inspired by Trap Adventure 2, a platformer known for its unexpected traps and challenging gameplay. The objective is to guide the player from the starting platform to the goal while avoiding dangerous obstacles.

The player starts on the left platform and must jump across three floating steps to reach the landing platform on the right. The third step contains surprise spikes, while the landing platform has a trap that pops out and slides forward, forcing the player to make a larger jump to reach safety.

Level Layout and Gameplay

Obstacle:	Explanation
1. Starting platform	The player's starting point, with an overhanging block above it.
2. Floating steps	Three platforms requiring precise jumps.
3. Surprise spikes	Spikes that popout on the third step that make it unsafe to land on.
4. Landing trap	Spikes that popout and slide forward, requiring a larger jump.
5. Pit	The gap between platforms that the player must jump across.

2. Reason for Choosing This Level Design

I chose this level because Trap Adventure 2 focuses on unexpected traps, precision, and challenging player expectations.

- Unpredictability: The surprise spikes and moving landing trap make the level challenging.
- Gradual difficulty: The level begins with simple jumps and gradually introduces more difficult obstacles.
- Precision and timing: Players must control their jumps carefully to avoid spikes and reach safe platforms.
- Simple blockout: Basic geometric shapes clearly represent the platforms, hazards, player, and goal without requiring detailed models.

3. Choice of Visual Style

The level uses grey blocks for platforms, red and orange spikes for hazards, a blue capsule for the player, and a green disc for the goal. A dark background recreates the simple visual style of the original game.

The red and orange spikes also represent the different positions of the moving trap, making its movement easier to demonstrate.

4. Conclusion

This blockout recreates the core gameplay of Trap Adventure 2 through floating platforms, surprise spikes, and a moving trap. The design focuses on precision, timing, and unpredictability while using simple geometric objects to demonstrate the level layout and gameplay.
